Track: Hack 'N' Solve(open innovation) - HealthTech

"Your Health, Your Control- Anytime, Anywhere"

PROBLEM STATEMENT & EXISTING GAPS

The Problem We're Solving

Riya, a first-year hostel student, wakes up with fever and body pain in the middle of exams but has no idea if it's stress or something serious. Google only scares her with ten possible diseases, the campus health centre is unreachable, and no one is tracking that many hostel students feel the same. On most Indian campuses, students face symptoms, confusion, and outbreaks with low awareness and no early-warning system—so small problems quietly grow into hostel-wide health crises.

LOW HEALTH AWARENESS

- Students don't know when to seek help
- Rely on unreliable Google searches
- Health literacy gap delays care

CAMPUS HEALTH RISKS

- Flu outbreaks spread fast in dorms
- Mental health stress ignored
- Women's health concerns overlooked

FRAGMENTED SYSTEMS

- No early warning for disease clusters
- Health centers overwhelmed
- Zero coordination between students & doctors

- 67% of students delay seeking medical help due to lack of awareness
- Campus flu outbreaks can infect 30-40% of dorm residents
- 78% of students want personalized health guidance but don't know where to find it

OUR SOLUTION

~ HEALTHSYNC CAMPUS

Comprehensive Campus Health Companion

AI Symptom Checker

- Analyzes symptoms and provides possible diagnoses
- Recommends next steps: monitor, self-care, or consult doctor
- Multi-language support for accessibility

Community Health Monitoring

- Detects symptom clusters in real-time
- Early outbreak alerts to students & admin
- Prevents hostel-wide spread

Student Health Log

- Track symptoms, medications, appointments
- Personalized health insights over time
- Privacy-first data storage

Wellness Hub

- Mental health support & stress management
- Nutrition tracking & lifestyle tips
- Women's health focus (PCOS, periods, wellness)

Care Coordination

- Book campus health center appointments
- Share symptom history with doctors
- Vaccination & follow-up reminders

From Symptom to Care in Minutes

Student feels unwell	Initial symptom onset
Opens app	Accessing health services
Logs symptoms	AI analysis begins
Gets recommendations + alerts	Personalized health advice
Books telemedicine/campus appointment	Seeking professional help
Health center receives data	Data integration for care

What makes HealthSync Campus Unique

- **Campus-first design:** Built specifically for Indian college hostels and classrooms, not generic health apps.
- **AI + Community lens:** Combines personal symptom checking with campus-wide outbreak detection.
- **Student wellness focus:** Covers physical health, mental health, nutrition, and women's health in one place.
- **Ready for integration:** Easily connects to campus health centers for appointments and alerts.

"The ONLY campus health platform that combines AI prediction + community monitoring + women's health + expert access in ONE student-friendly app"

Prototype

TECHNICAL IMPLEMENTATION

How We Build It - Tech Architecture

System Architecture Diagram (3-tier):

STUDENT MOBILE APP (Frontend)
Flutter / React Native - Cross-platform
-Symptom input
-Alerts
-Health log
-Telemedicine
REST APIs / WebSockets

↓

BACKEND + AI ENGINE (Server)
Node.js / Django + Python ML Models
-User authentication (JWT)
-Symptom analysis AI
-Community monitoring algorithm
-Real-time alert system
Data encryption & privacy

↓

DATABASE + CLOUD INFRASTRUCTURE
MongoDB / PostgreSQL + Firebase/AWS
-User health profiles (encrypted)
-Campus health data (anonymized)
-Disease outbreak tracking

TECH STACK

Frontend: Flutter (cross-platform - iOS, Android, Web)

Backend: Node.js + Express OR Django + FastAPI

AI/ML: Python (scikit-learn, TensorFlow for symptom classification)

Database: MongoDB (flexible schema) OR PostgreSQL

Real-time: WebSockets for live alerts

Cloud: Firebase (auth + hosting) OR AWS (scalable infrastructure)

APIs: WHO health data, local hospital APIs, Google Maps (campus location)

Security: JWT authentication, AES-256 encryption, HIPAA/GDPR compliant design

BUSINESS MODEL & SUSTAINABILITY

Sustainable Revenue Model

Hybrid Monetization Strategy

Primary Revenue:

B2B Institutional Partnerships

- Universities pay ₹200-500 per student/year for campus-wide access
- Includes admin dashboard for health center
- Example: 5,000 students = ₹10-25 lakhs/year
- Why: Reduces outbreak costs, improves student care

Secondary Revenue Streams:

1. Freemium Model (Individual Students)
   - Free: Basic symptom checker, health alerts, reminders
   - Premium (₹99/month): Telemedicine, advanced AI predictions, expert access
2. Campus Health Center SaaS
   - ₹50K-2L/year for outbreak monitoring dashboard & analytics
3. Corporate Wellness Partnerships
   - Health brands sponsor educational content (clearly disclosed)
4. Anonymized Data Insights
   - Aggregated health trends for public health research (privacy-first)

Real- World Impact & Path Forward

EXPECTED IMPACT

For Students

- 60% improvement in health awareness & literacy
- Early detection → better outcomes
- Reduced anxiety through reliable guidance

For Campus

- 40% reduction in outbreak spread
- Lower health center burden during flu season
- Data-driven resource planning

At Scale

- Scalable to 1000+ colleges across India
- Reduced healthcare costs via prevention
- Contributes to national disease monitoring

FEASIBILITY: READY TO DEPLOY

Technical Feasibility: HIGH

- Mature AI models & cloud infrastructure
- Built with existing open-source tools
- Highly scalable architecture

Data Feasibility: HIGH

- Reliable health data from WHO, ICMR, CDC
- Campus health centers willing to share data
- User-generated symptom data grows dataset

Regulatory Feasibility: MEDIUM-HIGH

- HIPAA/GDPR-compliant design
- Clear consent & privacy policies
- Campus partnerships reduce compliance burden

Market Feasibility: VERY HIGH

- 4 crore students in Indian higher education
- Post-COVID health tech demand
- Universities actively seeking digital health solutions

Join us in revolutionizing campus health!

"HealthSync Campus isn't just an app - it's a movement toward proactive, informed, and empowered student health. Together, we can make campuses healthier, one student at a time."

THANK YOU
